

Izrada Nacionalnog profila ZZNR

02. Septembar 2020.

Obavljen je razgovor sa prof. dr Petrom Bulatom, profesorom medicine rada na beogradskom Medicinskom fakultetu. Tom prilikom su sagledani i evidentirani problemi u oblasti zaštite i zdravlja na radu u Crnoj Gori. Ovi podaci će biti korišćeni za potrebe izrade nacionalnog profila OSH, u okviru projekta Međunarode organizacije rada, a sve u cilju poboljšanja stanja u ovoj oblasti i sagledavanja perspektiva za budući razvoj. Kao osnovni problemi navedeni su: loše funkcionisanje medicine rada, nepostojanje registra povreda na radu i profesionalnih oboljenja i nezastupljenost zaštite na radu u obrazovnom sistemu - srednjim stručnim školama i tehničko-tehnološkim fakultetima. Kao veliki institucionalni problem prepoznato je i nepostojanje Nacionalnog savjeta za zaštitu i zdravlje na radu, kao i funkcionalnog sistema osiguranja.

Development of the National Profile of OSH September 2nd 2020

An discussion was held with prof. dr Peter Bulat, professor of occupational medicine at the Belgrade Medical Faculty. On that occasion, the problems in the field of occupational safety and health in Montenegro were reviewed and recorded. These data will be used for the purposes of creating a national profile of OSH, within the project of the International Labor Organization, all in order to improve the situation in this area and to view the prospects for future development. The main problems are: poor functioning of occupational medicine, non-existence of a register of injuries at work and occupational diseases, as well as the lack of occupational safety in the educational system - secondary vocational schools and technical-technological faculties. The non-existence of the National Council for Occupational Safety and Health, as well as a functional insurance system, has been recognized as a major institutional problem.
